

Emergency Medical Technician (EMT)

Course Description

The Emergency Medical Technician is described in the National EMS Scope of Practice as basic emergency care and transportation for critical and emergency patients who access the emergency medical system. This individual will possess the basic knowledge and skills necessary to provide patient care and transportation. Emergency Medical Technicians function as part of a comprehensive EMS response under medical oversight. They perform interventions with the basic equipment typically found on an ambulance. They are a link from the scene to the emergency health system. This course will meet the National EMS Education Standards and Instructional Guidelines for Emergency Medical Technician and prepare the participant for National Registry cognitive and psychomotor examinations at the EMT level.

Course Delivery

A flipped mastery learning model will be utilized in the delivery of course content. A flipped model utilizes internet based, streaming video education. Participants will be required to independently watch pre-recorded videos that support understanding and remembering key concepts from reading textbook chapters. Face-to-face practical learning includes case studies and skill drills to apply their understanding with hands-on activities. Experiential learning during ambulance rotations afford “real-world” immersion into the environment of practice. Mastery of content will be required and measured by computer-based examinations and practical skill performance.

Fall 2016 REGISTRATION

DEADLINE: 8/5/2016 3 p.m.

Students must pre-register for this program.

Contact Carrie Kiess-Hill to Register

570-327-4775 or crh6@pct.edu.

Online Registration:
